

Pygeostat

Geostatistical data analysis tool for soil and groundwater data from DOV, application to PFAS contamination

Guillaume Vandekerckhove

Masterthesis hydrogeology and mineral resources

Promotors: Thomas Hermans, Ellen Van De Vijver, Marleen Van Damme

Goal

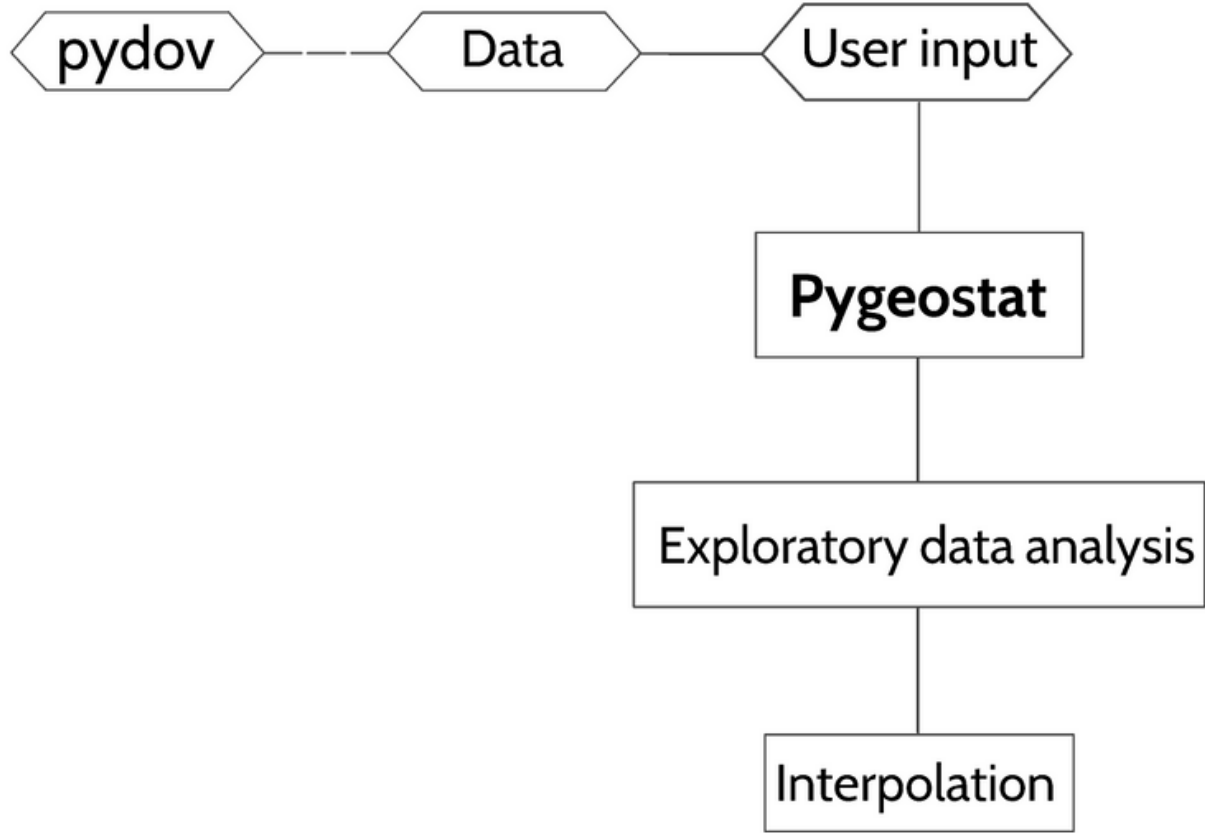

Program

- Open-source and automated
- Available through DOV and github
- Will work for the data from DOV through pydov (not only PFAS or own dataset)
- Based on geostatistics

- Get familiar with the data (statistics, correlation, ...)
- Get an estimation of the data at unsampled locations
 - with a quantification of the accuracy of the estimation
- Get the probability of exceeding a threshold at unsampled locations

Results

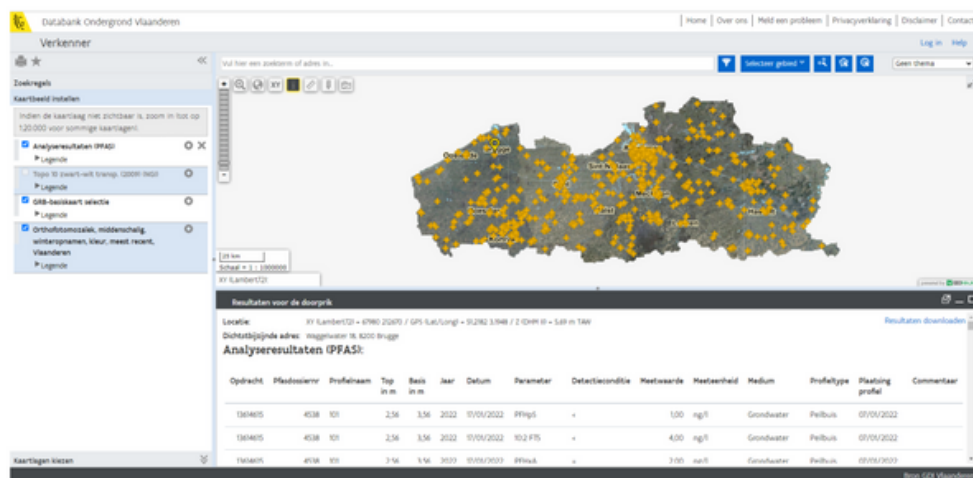

- Part of the discussion of safety and remediation levels
- Used to prioritize the contaminated sites

Data

- x
 - y
 - top filter/borehole (m ground level)
 - bottom filter/borehole (m ground level)
 - date
 - parameter(s) (PFOA, PFOS, etc.)
 - value (ng/l or ng/kg ds)
-
- groundwater (ng/l) & soil (ng/kg ds) data

DEPARTEMENT OMGEVING | VLAAMSE MILIEUHAATSCHAPPIJ | DEPARTEMENT MOBILITEIT & OPENBARE WERKEN

Data

OVAM (Public Waste Agency of Flanders)
DOV (Database Flanders)

Soil
04/04/2022
769 locations

Groundwater
02/04/2022
478 locations

Legend

Soil

○ OVAM_DOV_040422

Groundwater

● OVAM_DOV_020422

● VMM_freatisch_grondwater_voorjaar_2022

GRB-raadpleegdienst

VMM (Flemish Environment Agency)
pydov

Groundwater
2022
194 locations

Data

- x
 - y
 - top filter/borehole (m ground level)
 - bottom filter/borehole (m ground level)
 - date
 - parameter(s) (PFOA, PFOS, etc.)
 - value (ng/l or ng/kg ds)
-
- groundwater (ng/l) & soil (ng/kg ds) data

User input (selection)

General data info

- download data pydov (yes/no)
- inputfile (path to data/-)
- parameter(s) (PFOA-PFOS-EFSA4-Drinkwater20)
- log values (True/-)
- dimension (2D/3D)

Exploratory data analysis

- exploration data analysis (yes/no)
- describe dataset (yes/no)
- correlation analysis (yes/no)

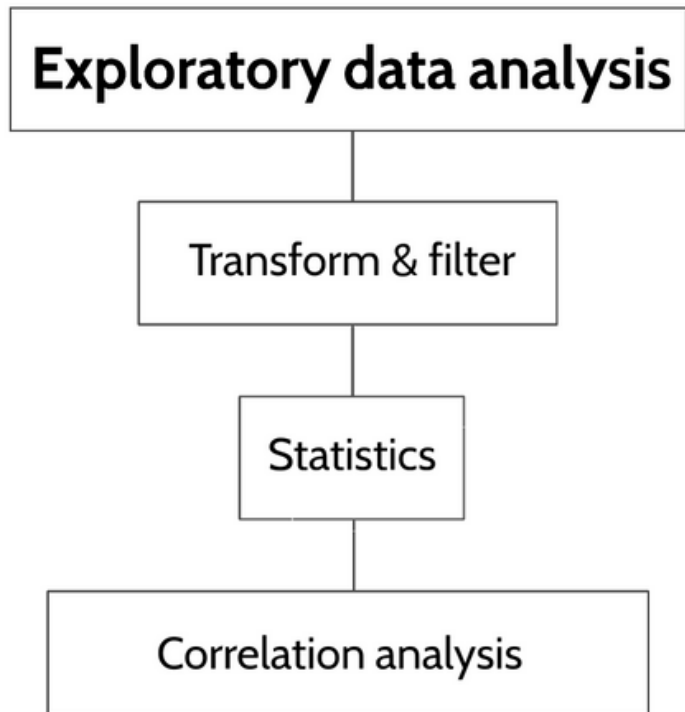

Interpolation

- interpolation (yes/no)
- ordinary or indicator kriging (OK/FIK)

PySgems

<https://github.com/robinthibaut/pysgems.git>

Transform & filter

geometry	x	y	z_top	z_basis	date	PFOS	PFOA	EFSA4	Drinkwater20	xy-coordinates

geometry = x, y, z_top, z_basis

3D filtering (geometry):

- Check the parameter comments (f.e. PFOA = PFOA_L + PFOA_V)
- Take the most recent data
 - If multiple data points have the same date, take the **average**

-> **3D geometry is unique**

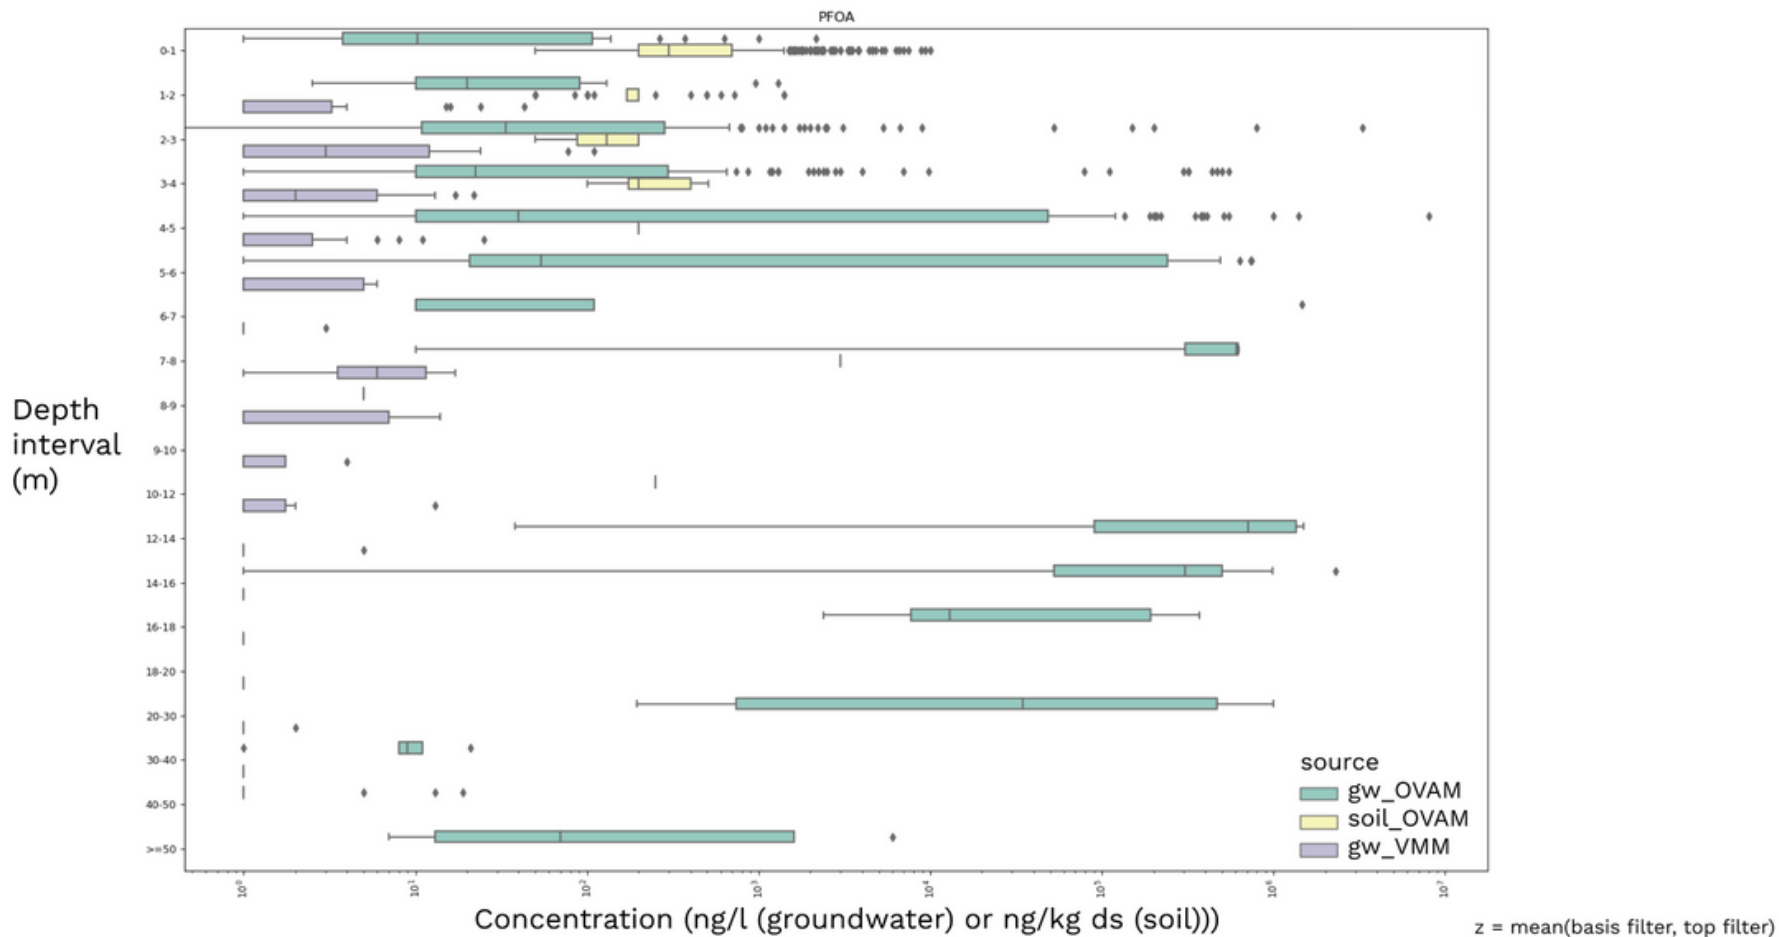

2D filtering (xy-coordinates):

- Take the most recent data
 - If multiple data points have the same date, take the **maximum** --> worst case scenario

-> **2D geometry is unique**

Statistics

Combined 3D dataset (VMM, gw_OVAM, soil_OVAM)

Correlation analysis within same dataset

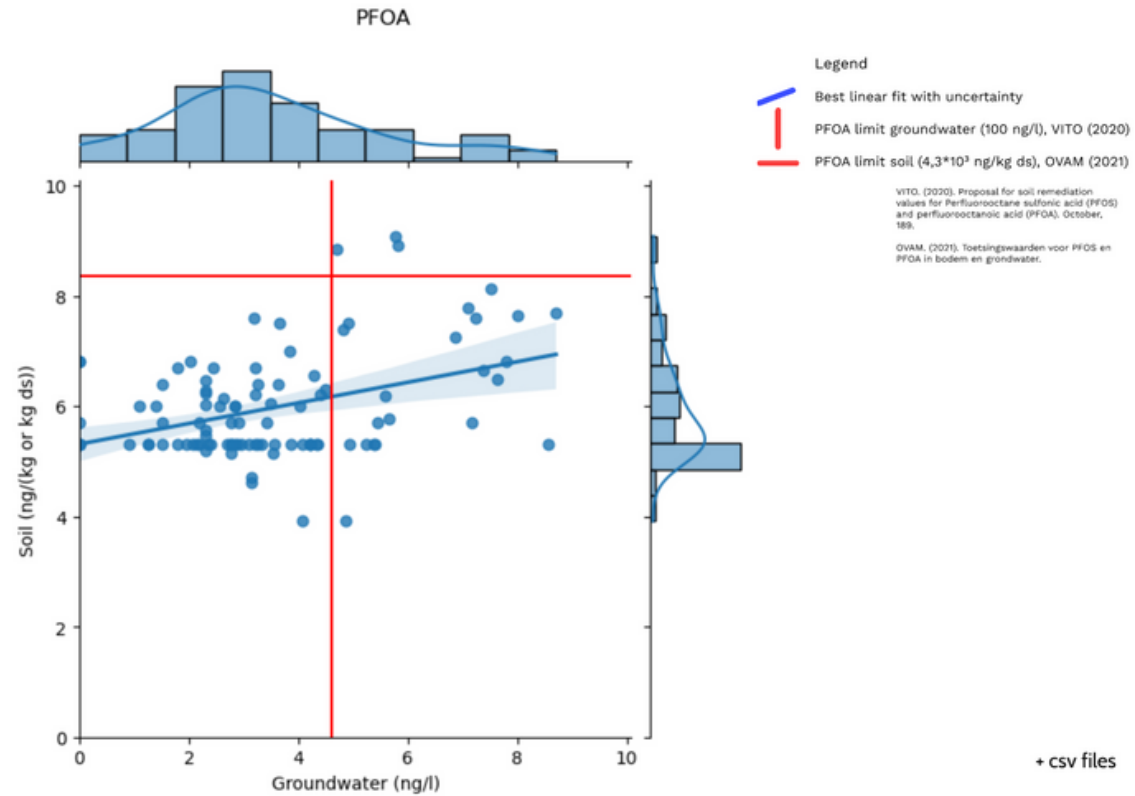

VMM data - log values

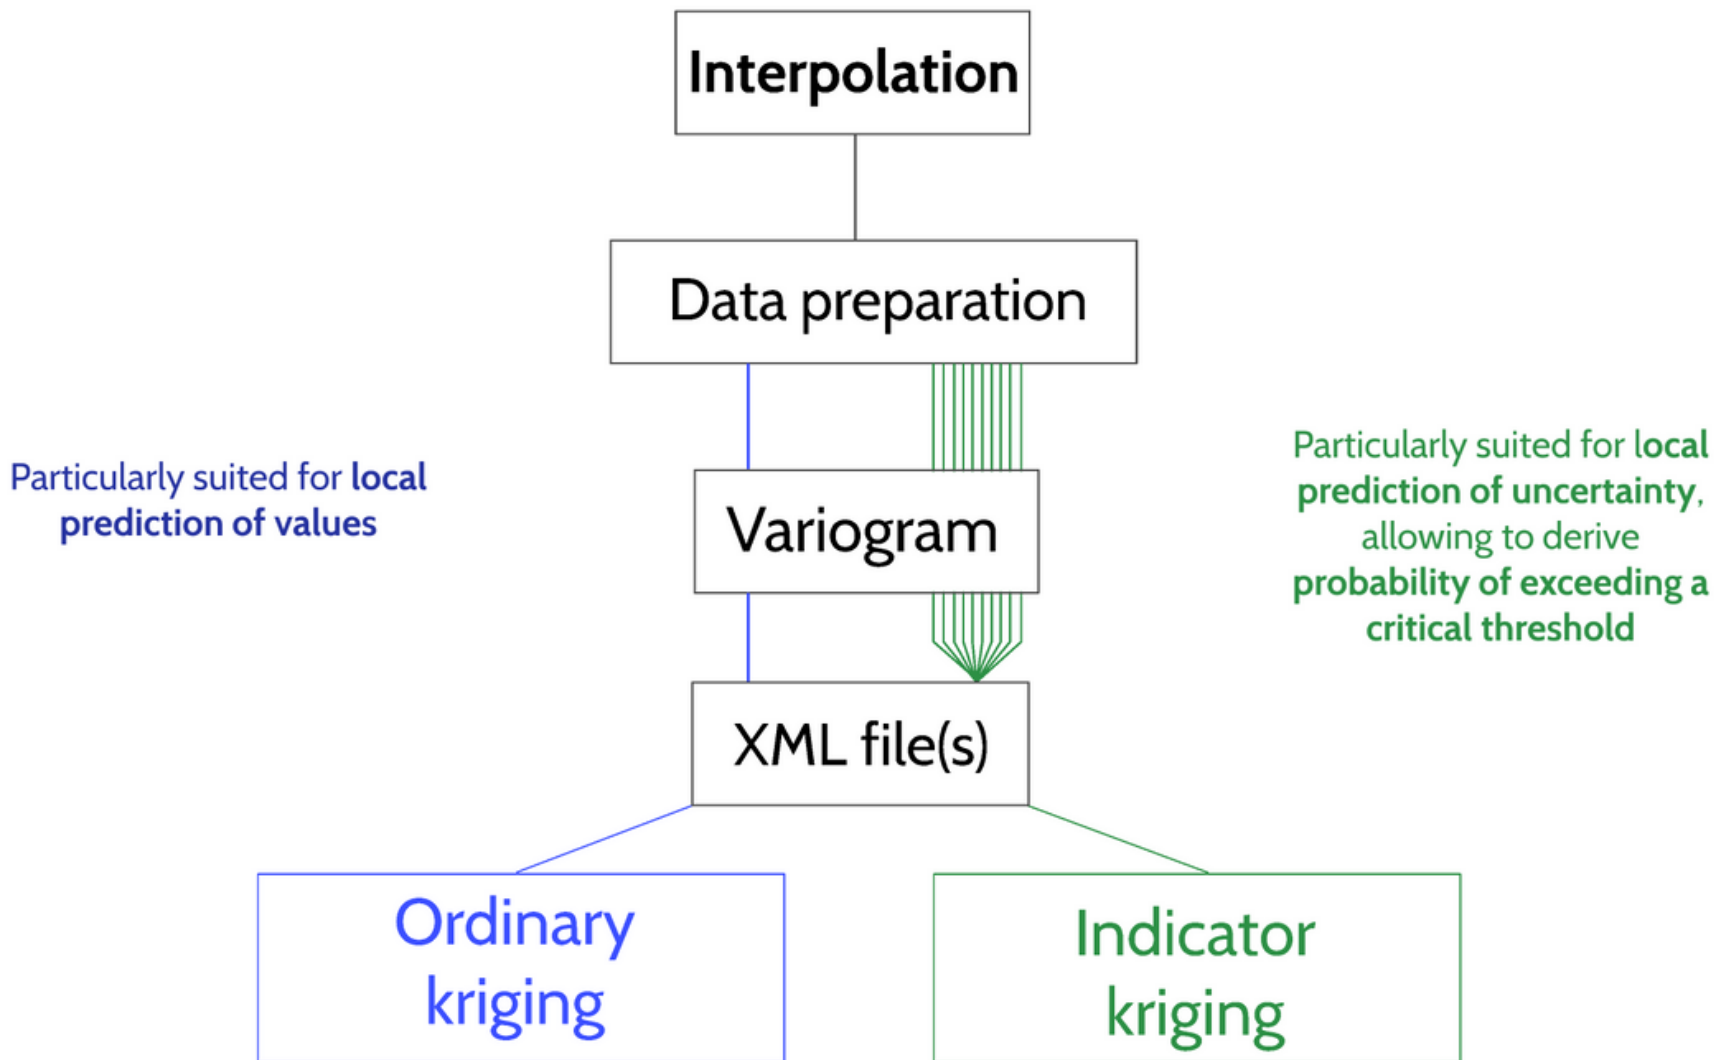

+ csv files

Correlation analysis between datasets

OVAM soil and groundwater 2D data - log values - PFOA

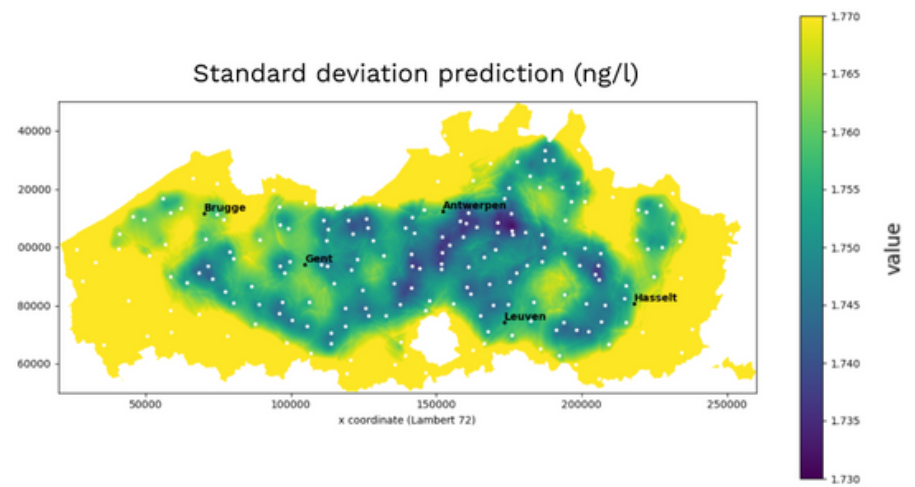

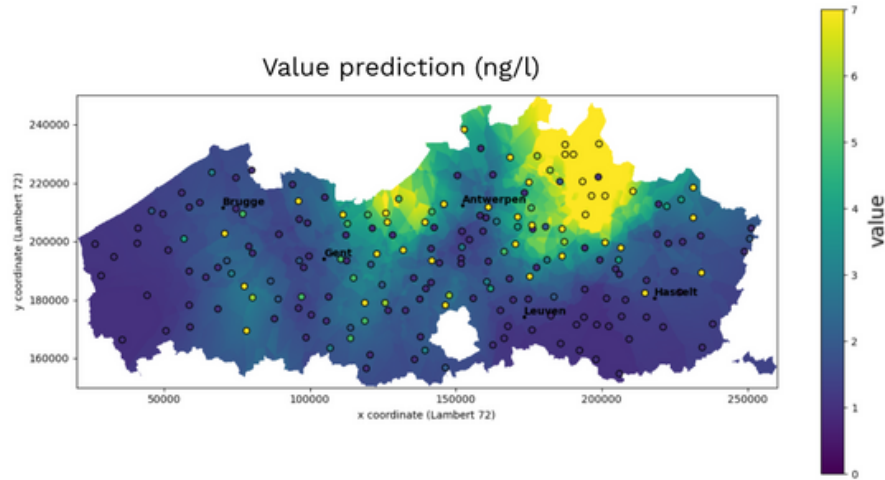

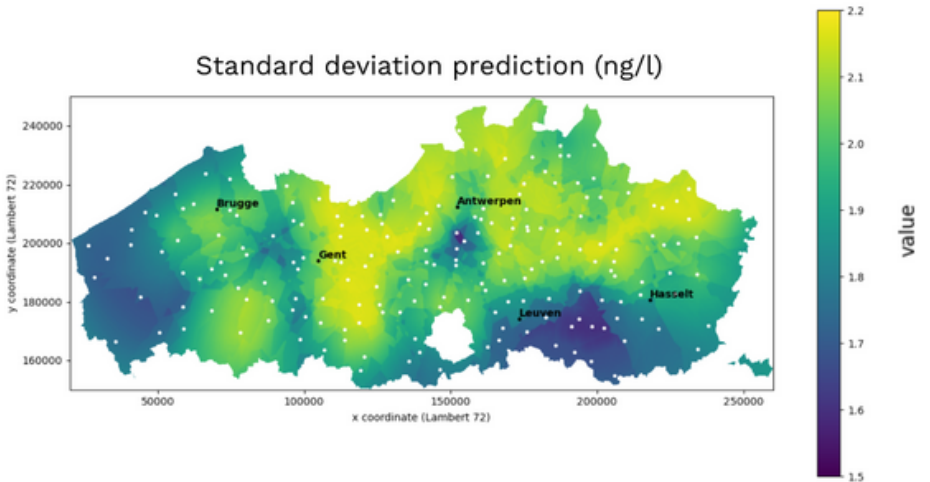

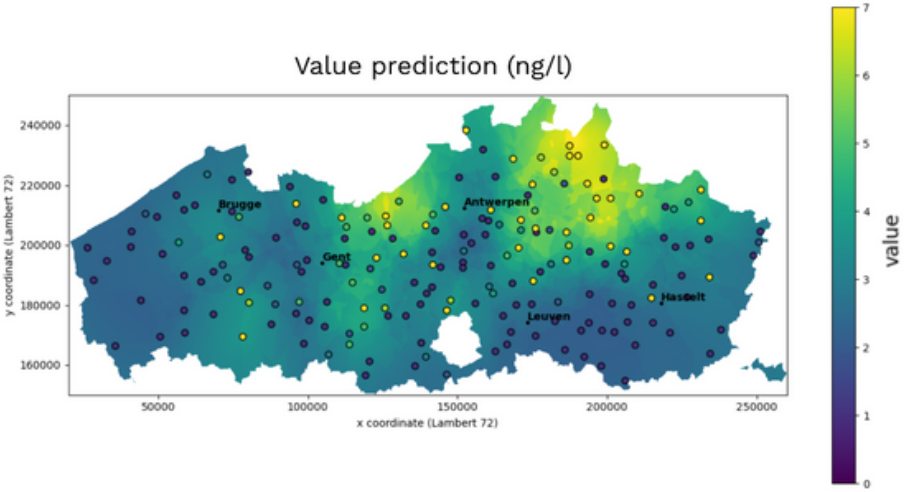

Variogram - general

Ordinary kriging - VMM, PFOA

Indicator kriging - VMM, PFOA

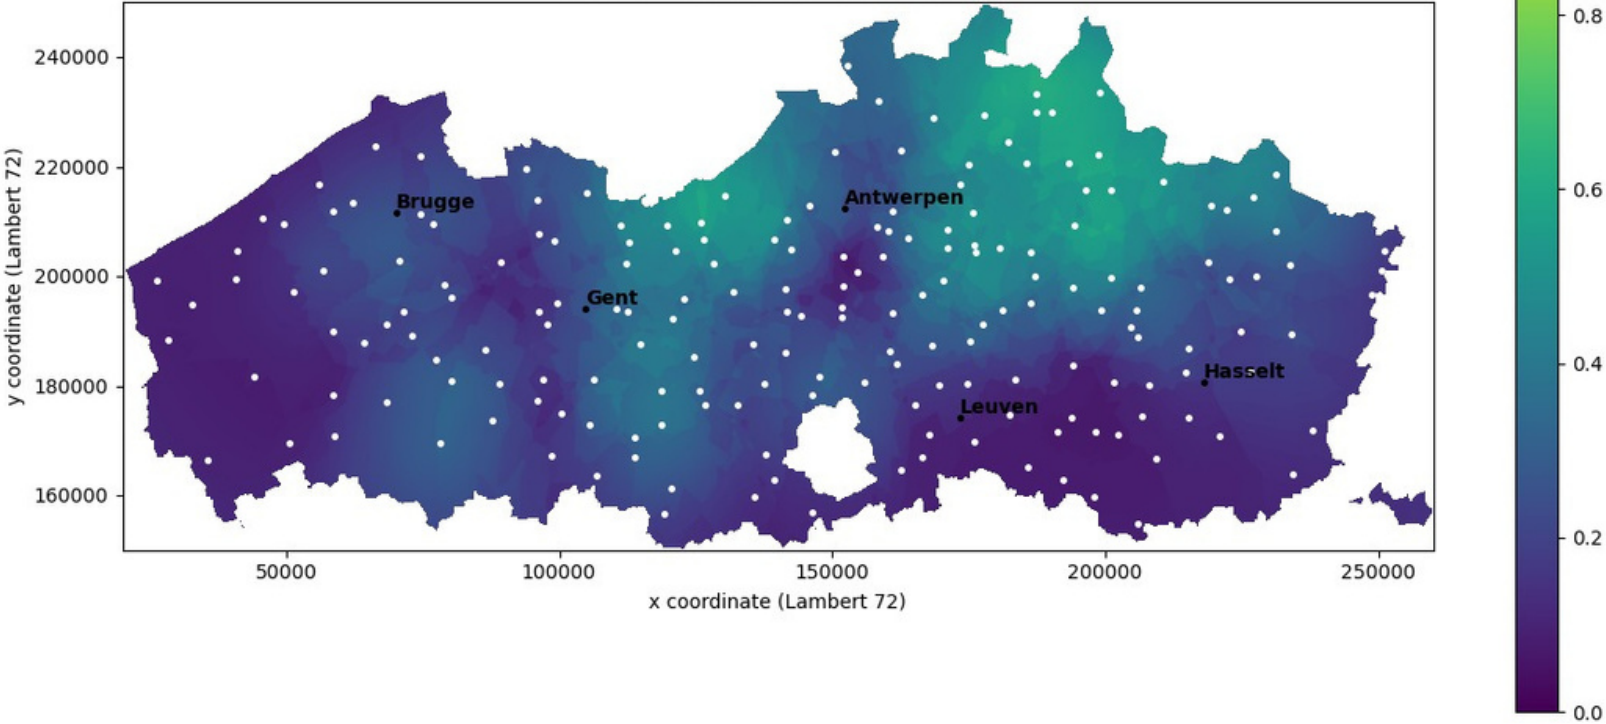

Indicator kriging - VMM, PFOA

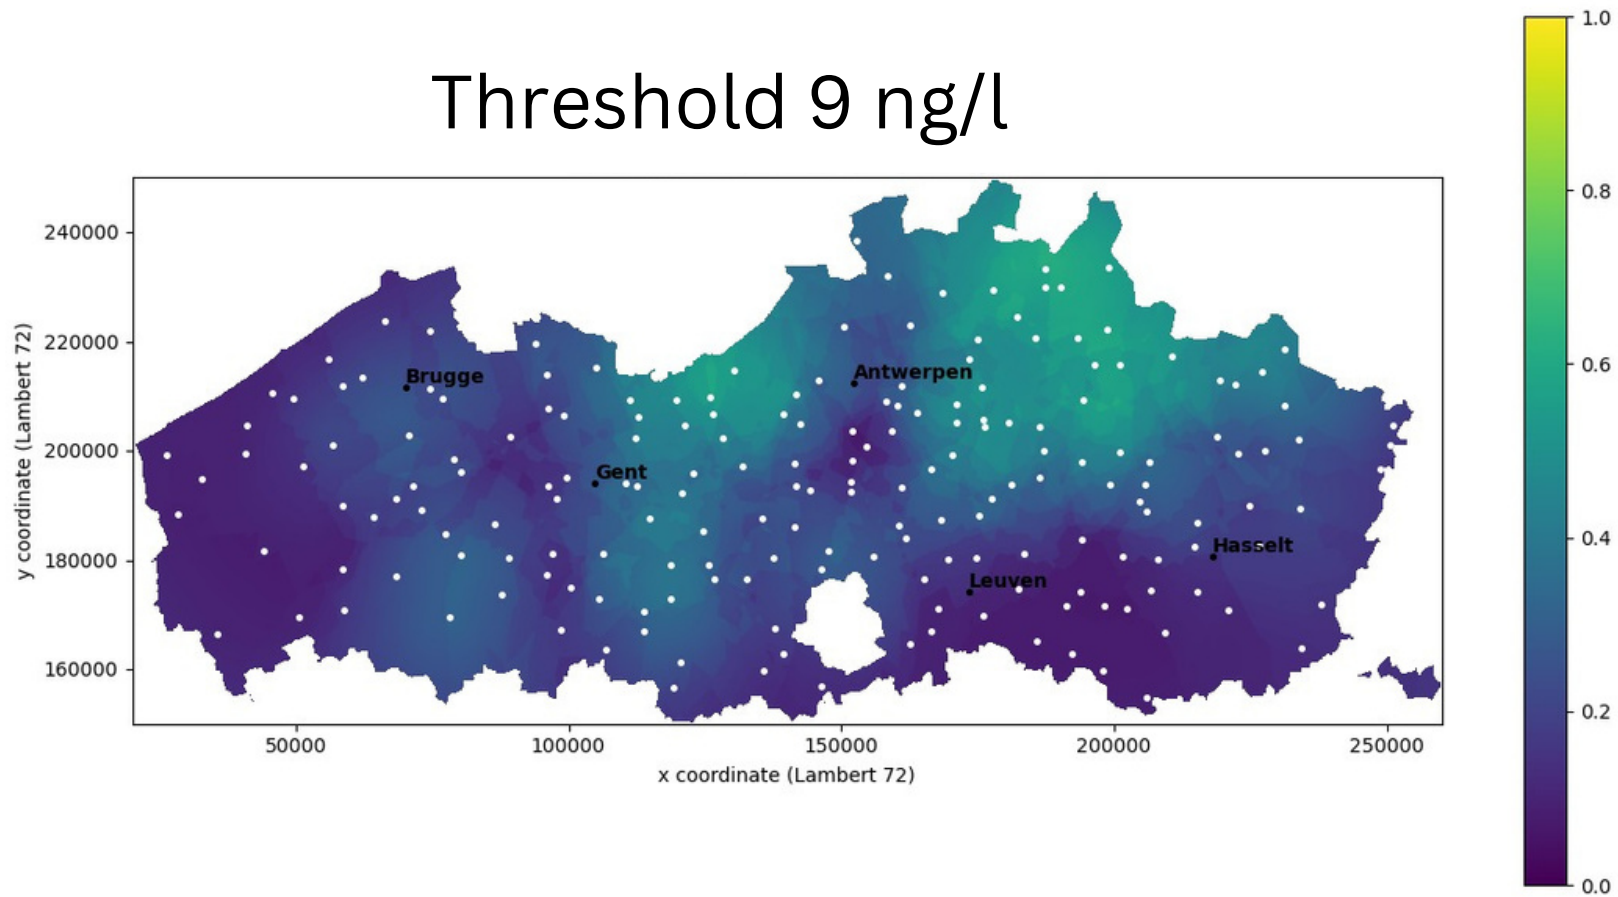

User-defined thresholds

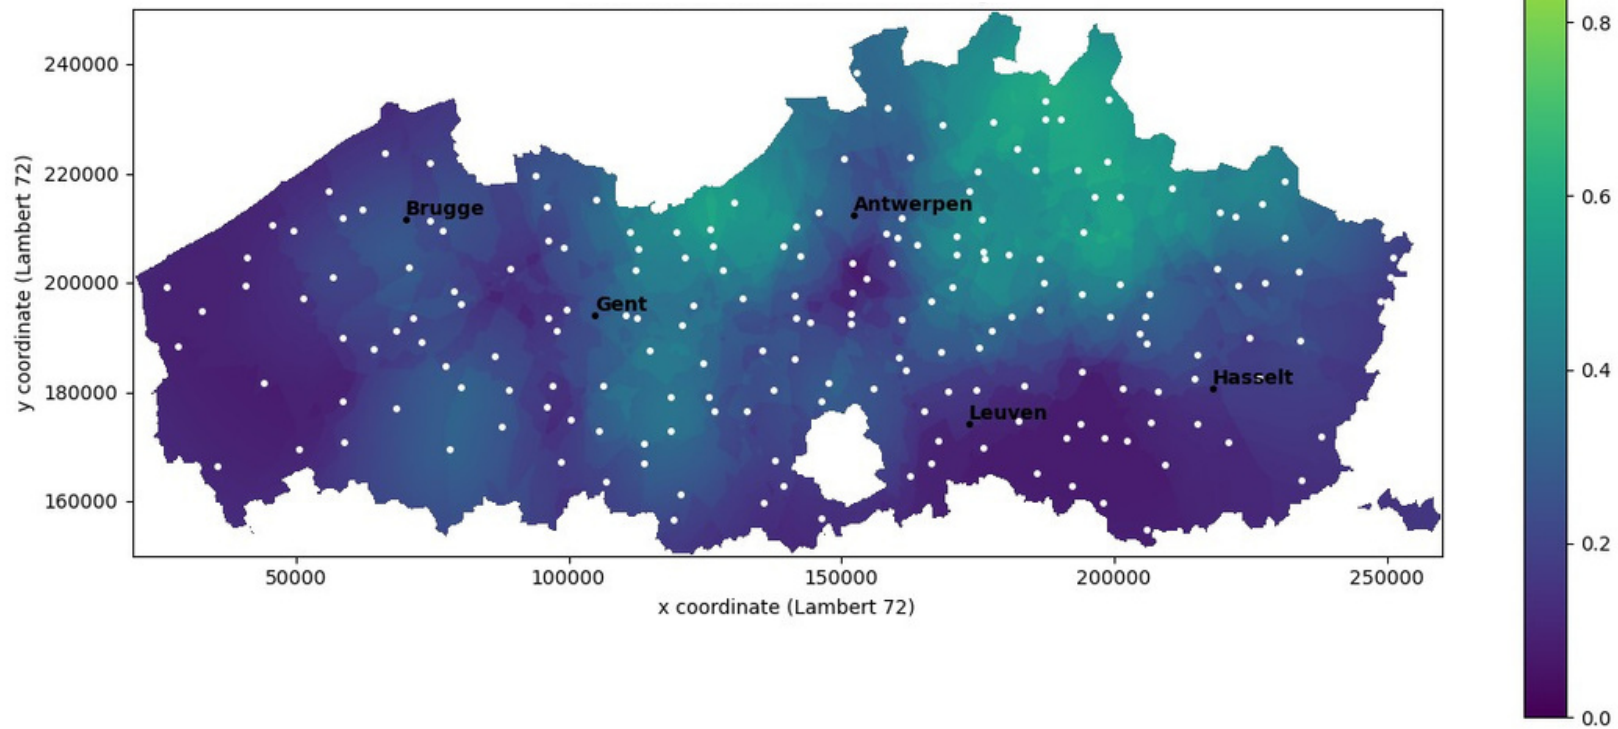

Threshold 10 ng/l

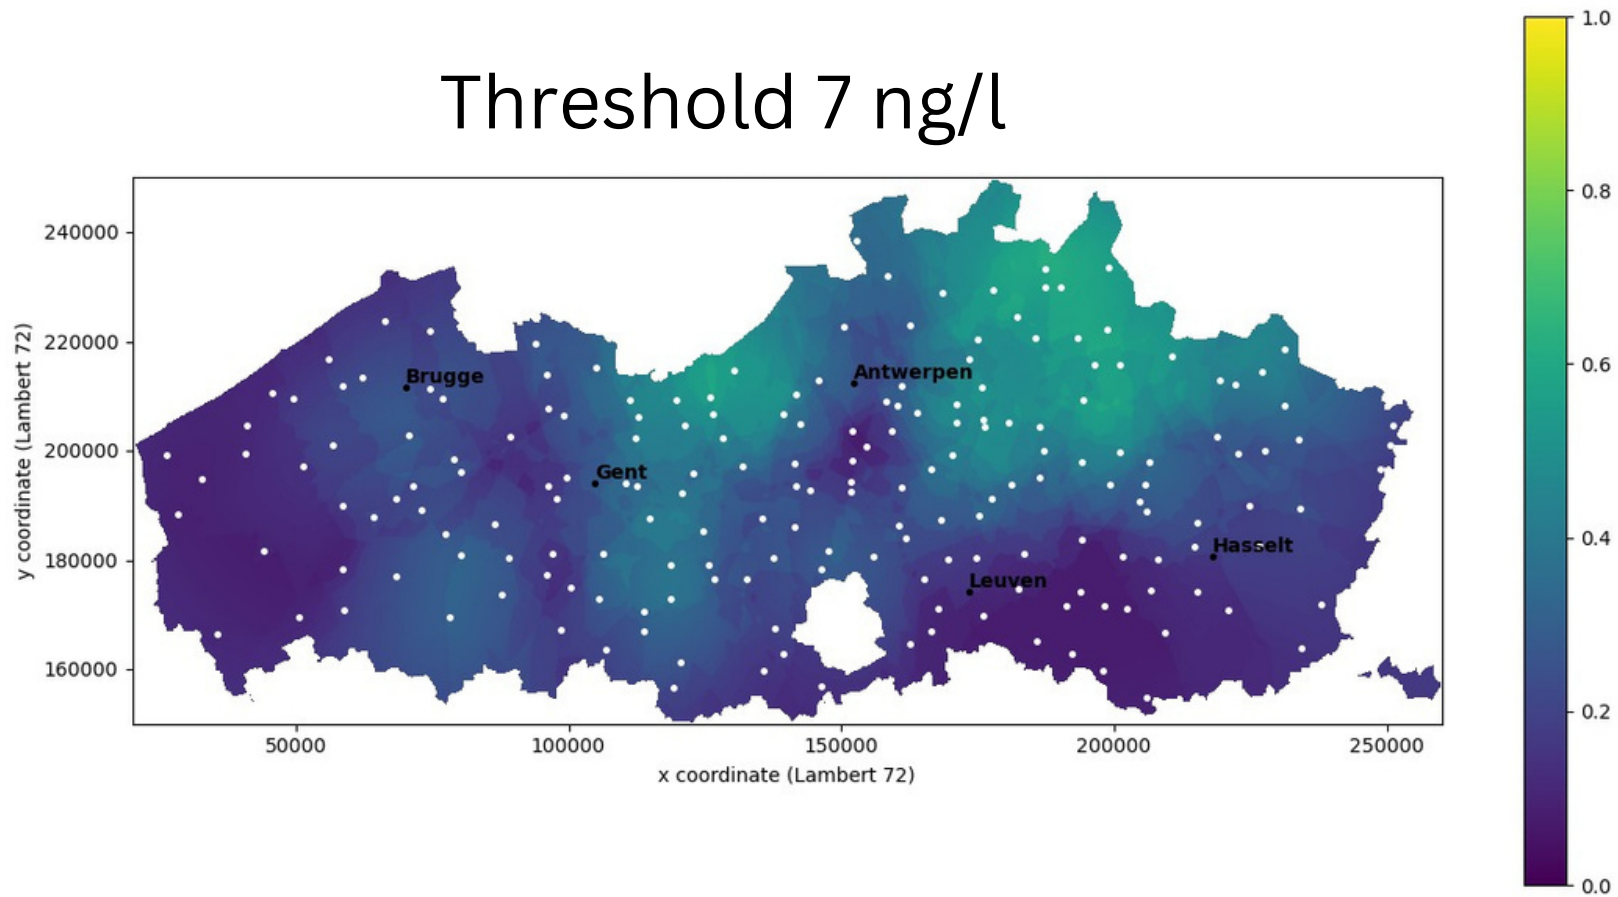

Threshold 9 ng/l

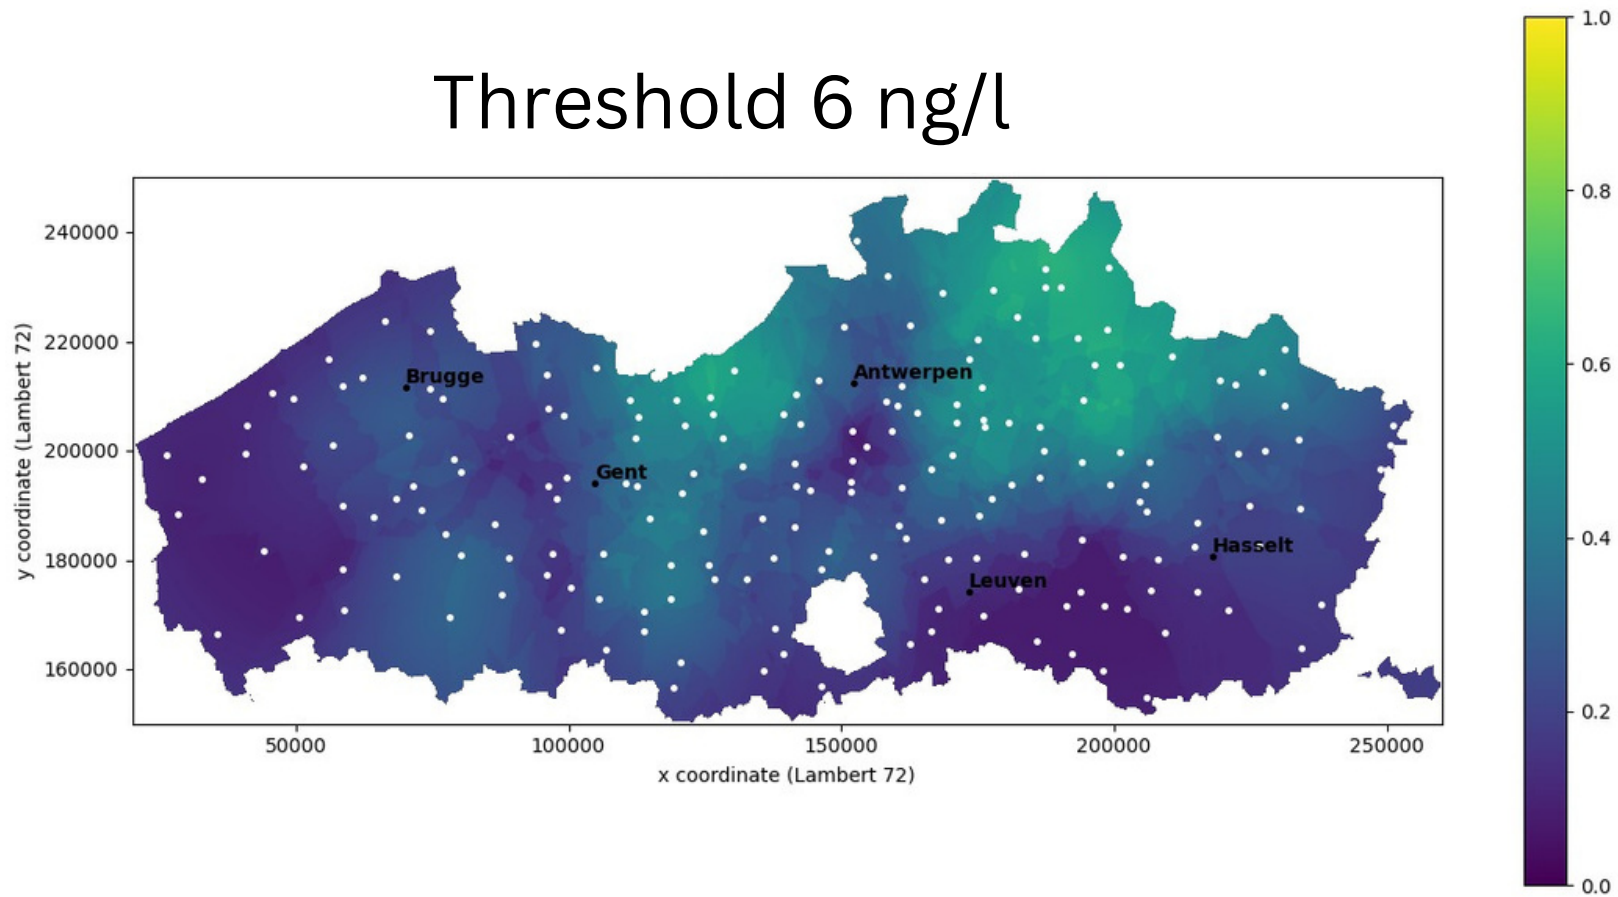

Threshold 8 ng/l

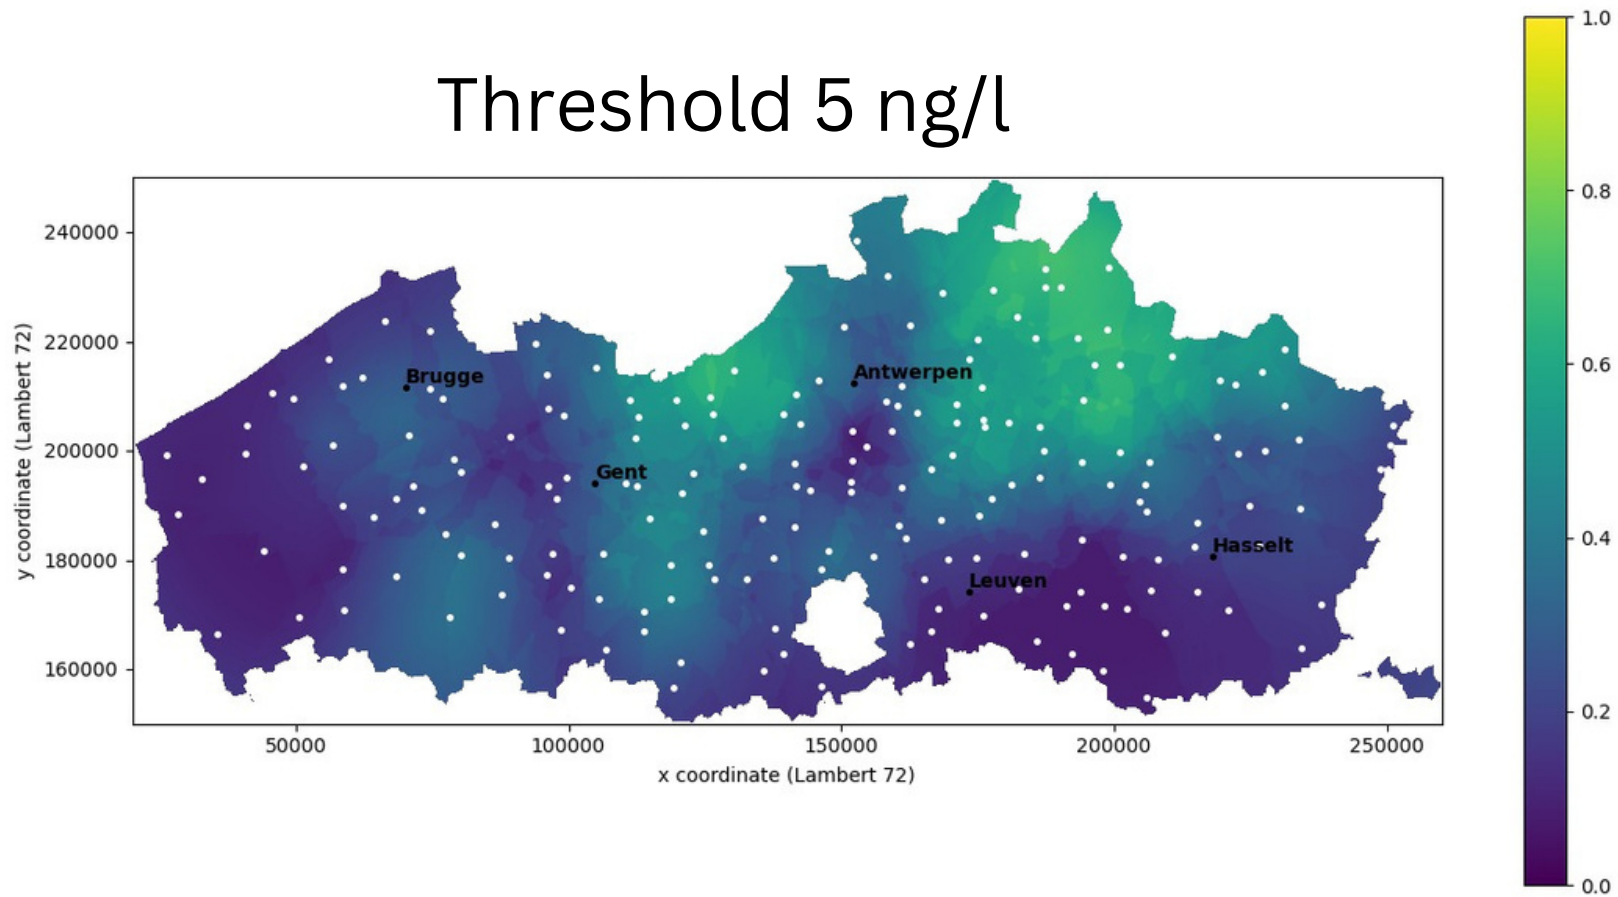

Threshold 7 ng/l

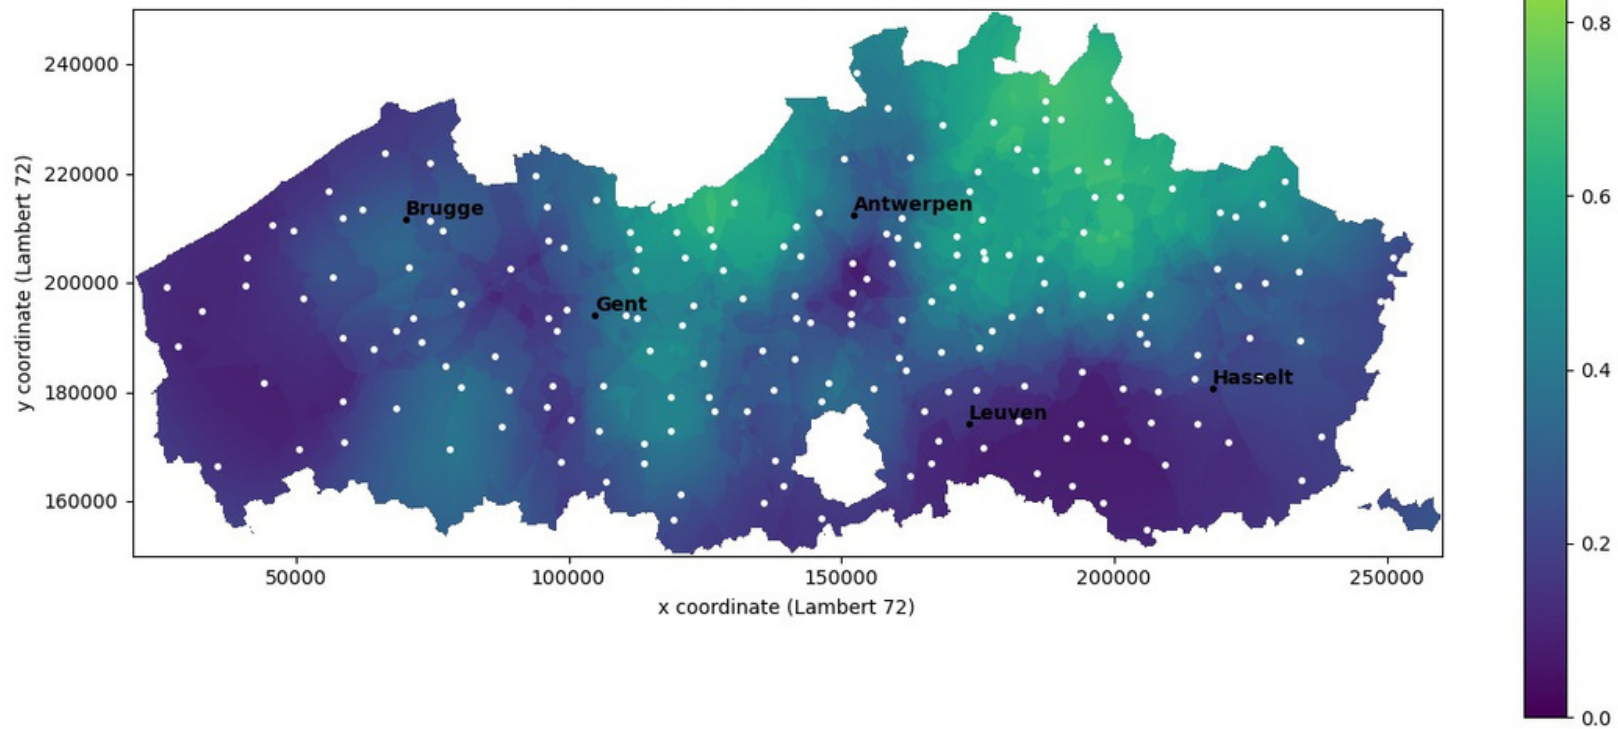

Threshold 6 ng/l

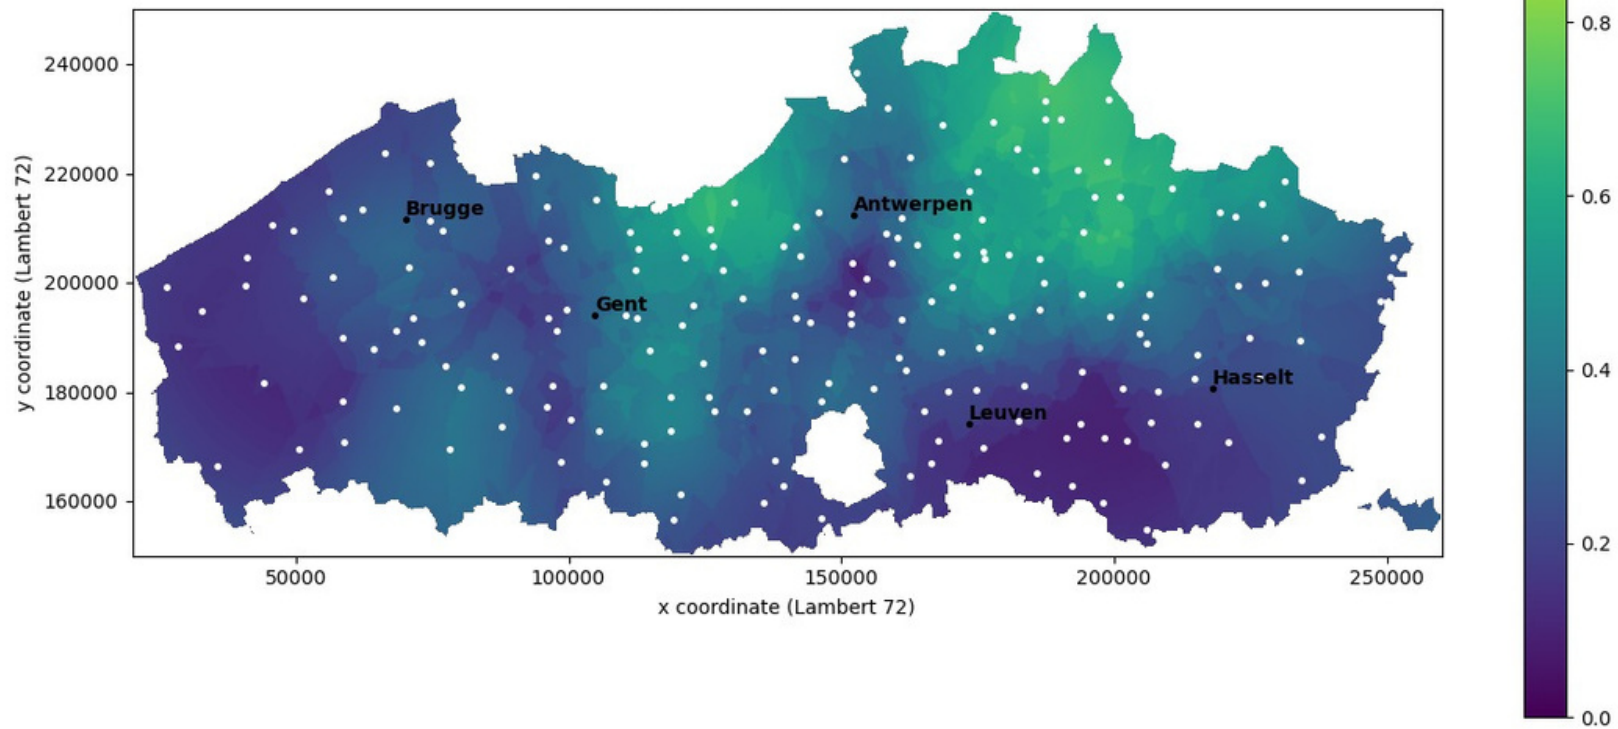

Threshold 5 ng/l

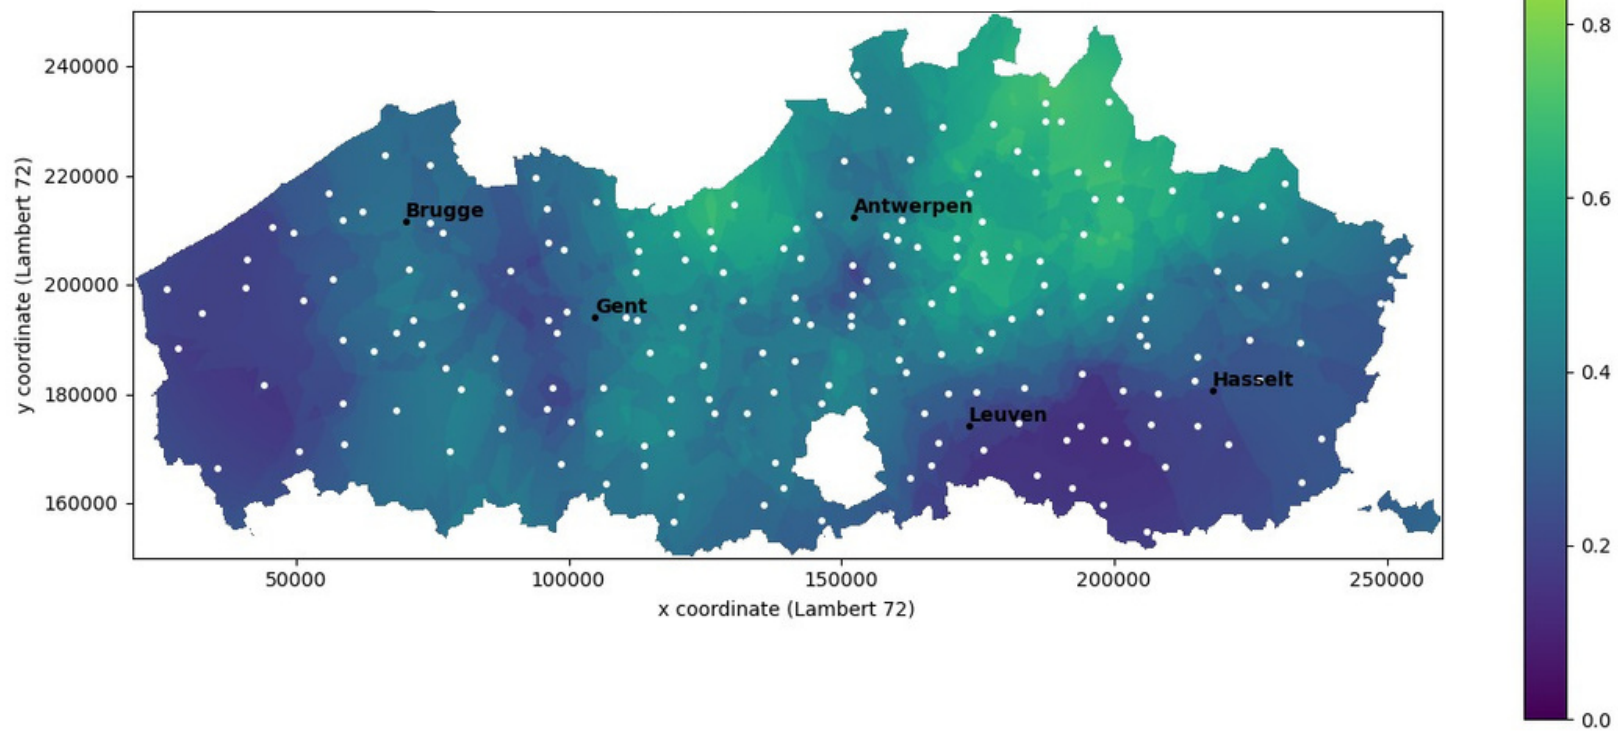

Threshold 4 ng/l

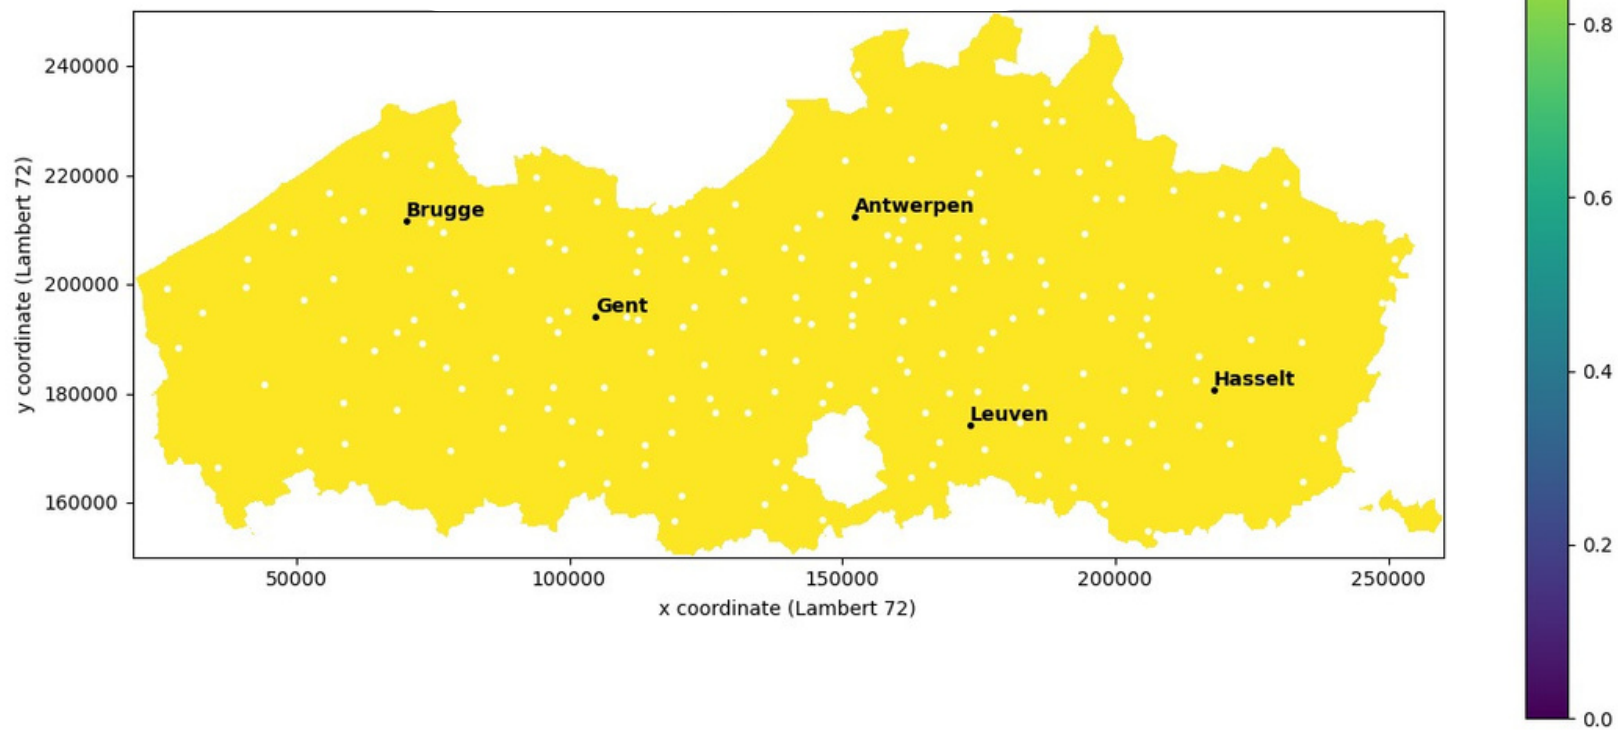

Threshold 3 ng/l

Threshold 2 ng/l

Threshold 1 ng/l
